

Course code																																	
Type and description	Elective Course																																
ECTS credit	1																																
Course name	Statistical optimisation of industrial processes																																
Course name in Polish	Optymalizacja statystyczna procesów przemysłowych																																
Language of instruction	English																																
Course level	8 PRK																																
Course coordinator	Dr hab. inż. Tomasz Ganicz																																
Course instructors	Dr hab. inż. Tomasz Ganicz																																
Delivery methods and course duration	<table border="1"> <thead> <tr> <th></th> <th>Lecture</th> <th>Tutorials</th> <th>Laboratory</th> <th>Project</th> <th>Seminar</th> <th>Other</th> <th>Total of teaching hours during semester</th> </tr> </thead> <tbody> <tr> <td>Contact hours</td> <td>0</td> <td>0</td> <td>0</td> <td>15</td> <td>0</td> <td>0</td> <td>15</td> </tr> <tr> <td>E-learning</td> <td>No</td> <td>No</td> <td>No</td> <td>No</td> <td>No</td> <td>No</td> <td></td> </tr> <tr> <td>Assessment criteria (weightage)</td> <td>0,00</td> <td>0</td> <td>0</td> <td>100%</td> <td>0</td> <td>0,00</td> <td></td> </tr> </tbody> </table>		Lecture	Tutorials	Laboratory	Project	Seminar	Other	Total of teaching hours during semester	Contact hours	0	0	0	15	0	0	15	E-learning	No	No	No	No	No	No		Assessment criteria (weightage)	0,00	0	0	100%	0	0,00

Assessment criteria (weightage)	0,00	0	0	100%	0	0,00																											
Course objective	<ol style="list-style-type: none"> 1. Acquiring knowledge about basic concepts of statistical modelling of industrial processes – statistical factor tests, correlation and regression of statistical data sets, time series forecasting, limitations of statistical methods. 2. Acquire the ability to select appropriate statistical methods for solving optimization problems. 3. Acquire the ability to solve problems based on statistical models using examples of processes in the paper industry. 																																
Learning outcomes	<p>Having completed the course student:</p> <ol style="list-style-type: none"> 1. Understands the theoretical basis of selected statistical methods: structure of statistical tests, selection of correlation functions, forecasting based on time series; W4, U4, K1 2. Is able to select appropriate statistical methods to investigate and solve industrial problems and understand their limitations; W4, K1 3. Is able to practically apply appropriate statistical methods to build models of industrial processes and draw correct conclusions from them; U4, K1 																																
Assessment methods	<p>U4, K1 – project seminar presentation W4, U4, U2 – written project The final grade Presentation - 25% Project evaluation– 75%</p>																																
Prerequisites																																	
Course content with delivery methods	<p>SEMINAR</p> <ol style="list-style-type: none"> 1. The basics of statistics: Definition of data set, basic descriptive statistical functions and how calculate them using RealStat for Excel. 2. Statistical tests structure and examples: Student and ANOVA test 3. Correlation, regression and their limitations 4. Time series and its components, forecasting and its limitation, smoothing modelling 5. Introduction to optimisation models' solving: linear and non-linear <p>PROJECT</p> <ol style="list-style-type: none"> 6. Presentation of solutions to selected optimisation problems and their discussion. 																																

Basic reference materials	<ol style="list-style-type: none"> 1. W. Navidi, Statistics for Engineers and Scientists, 5th edition, McGraw-Hill Education, New York, 2019 2. D.C. Montgomery, C.L. Jenings, M. Kulahci, Introduction to Time Series and Forecasting, Willey & Sons, 2015. 3. G. Smook, Handbook For Pulp and Paper Technologists, 4th edition, TAPPI Press, 2016.
